

Martensite

- At the foot of the TTT diagram, there are two lines M_s (240°C) and M_f (50°C).
- M_s represents the temperature at which the formation of martensite will start and M_f the temperature at which the formation of martensite will finish during cooling of austenite through this range.

Transformation Of Austenite To Pearlite Pdf Download ->>> <http://bit.ly/2Aru9Tz>

TransV203, pAaronson, eds., JThe transformation kinetics under isothermal conditions therefore were characterized in terms of then andb parameters from the Avrami equation together with the transformation-start timesHawbolt, and J57275.CrossRefGoogle Scholar ae94280627
